TABLE OF CONTENTS

BLACOH PRODUCTS ARE DESIGNED TO HELP PREVENT, ENSURE, PROTECT YOUR PUMPING SYSTEM FROM HARMFUL AND DAMAGING HYDRAULIC SHOCK & VIBRATION. OUR UNITS CAN ELIMINATE UP TO 99% OF THE PULSATION.

This Capabilities Guide is great as a quick reference, but know that our sales and engineering team are always available for full support.

CONTACT US:
sales@blacoh.com

COMPREHENSIVE SOLUTIONS

There is no substitute for experience. Understanding your requirements and specific needs at a technical level and proof of design ensure you are getting the expertise you need and deserve.

TECHNICAL SALES SUPPORT

Our sales team and global footprint make it easy for you to get the answers you need and personalized solutions for your pumping system.

ENGINEERING ASSISTANCE

The engineering team is here to problem solve and provide you with the necessary drawings, technical documentation, calculations, and customized solutions.

QUICK TURNAROUND

Some of our units are ready to ship same day. Our customer service team is proud of our exceptional on-time delivery rate.

SINCE 1976

From common pumping system problems to complex issues involving fluid dynamics, Blacoh has been improving the performance, reliability, safety, and productivity of pumping systems for nearly 50 years.

FULL SYSTEM SOLUTIONS

As the industry's leader and foremost expert in the design and manufacture of fluid control products, Blacoh has the most expansive offering in the marketplace, all proudly made in the USA and backed by our team of engineering and application experts.

SURGE SOLUTIONS

Blacoh designs and develops customized solutions and transient pressure monitoring in large scale applications where more in-depth analysis and support are required to solve critical issues with water hammer and hydraulic surge.

WHAT MAKES THE BLACOH EXPERIENCE DIFFERENT

PROVIDING YOU WITH THE NECESSARY RESOURCES:

CONFIGURE ONLINE

[eConfigurator](#) allows you to build your product online and get a dimensional drawing to your specifications.

IMMEDIATE QUOTES

Our website's [eQuote](#) is a quick and easy way to request quotes online. Available 24/7.

ENGINEERING DRAWINGS

Engineering assistance and 3D drawings are available for easy implementation into your system model.

WEB & MARKETING ASSISTANCE

The Blacoh website has [literature](#) and [videos](#) for download. Create an account for access to additional [media](#) assets!

Enhance your knowledge and grow professionally with convenient online learning. Blacoh University is an e-learning resource dedicated to the discovery, development, and application of knowledge relating to fluid control processes across a variety of industries. Take advantage of white papers, articles, videos, and many other resources relevant to fluid control professionals.

INDUSTRY RESOURCES

It is not just about the products; we are dedicated to providing white papers, case studies, articles, and videos of a wide range of topics across various fluid related industries to grow professionally.

DISTRIBUTOR TRAINING

We provide in-person Distributor Training Sessions or you can view the virtual series online to enhance your industry knowledge and ability to confidently deliver fluid control solutions to end users.

ENGINEER PDH CREDIT

Engineering professionals can watch our courses, complete quizzes, and earn free Professional Development Hours (PDH) Lecture video topics include acceleration head, surge analysis, and water hammer.

MAINTENANCE VIDEOS

Quick and easy to view video tutorials describe the how-to's of installation, maintenance, and repair of our Blacoh product lines. Watch assembly videos for each model and get quick links to installation manuals.

THE ORIGINAL

AODDAMPENER™

PULSATION DAMPENER PRESIZED FOR AODD PUMPS

See the difference between a dampened and undampened system!

The AODDampener™ series is Blacoh's most cost effective dampener model for systems using AODD pumps. Designed exclusively for use with air operated double diaphragm (AODD) pumps, this stainless steel dampener is pre-sized for pumps up to 3" and features a unique fully automatic air control to save on energy costs.

The AODDampener is compatible with most fluids as well as a wide range of both plastic and metal system components. Connected to your plant's air supply line, the fully automatic air control reduces dampener air consumption. It only uses the amount of air required to adjust to changes in pump discharge pressure, ensuring the dampener remains at optimum charge.

SPECIFICATIONS

CONSTRUCTION: 316 Stainless Steel housing,
PTFE diaphragm

PUMP SIZE: 1", 1.5", 2", 3"

CONNECTIONS: NPT, BSP, ANSI Flange, Tri-Clamp

PRESSURE RATING: up to 150 psi (10.3 bar)

AIR CONTROL: Automatic

CERTIFICATIONS: ATEX available

HOW IT WORKS

Say “goodbye” to manual adjustments and “hello” to streamlined operation! The SENTRY Automatic Inlet Stabilizer sets a new industry standard. Pre-sized for 1.5” and 2” AODD pump inlets, this revolutionary solution will reduce wear and tear on the suction side of your pump.

The automatic air control valve incorporates a fully integrated, automatic venturi valve designed to accommodate negative pressures within the system.

During vacuum conditions, the valve lifts the bladder to maintain dampening capabilities. While under positive pressure, it forces the bladder down with compressed air. This dual-control mechanism ensures optimal system performance in both suction & positive pressure conditions.

ASME CERTIFIED

SURGESHIELD™

PULSATION DAMPENER & SURGE VESSEL

Housing Material	Bladder Material	Capacities	Inlet Size"	Inlet Type	Max Pressure	Certifications & Testing

Standard 15, 25, 37 gallon dampener series are designed to act as shock absorbers for your peristaltic pumps while also serving as small bladder-style surge vessels. Prevent pipe and pump damage as well as costly repairs with these durable buffers against the damaging effects of water hammer and pulsation from any positive displacement pump.

DETAILS

- Chargeable air control: no need for constant pressurized air source
- Carbon steel tanks painted blue; stainless steel tanks unpainted
- 1/2" NPT drain connection on inlet flange
- 1/2 NPT PSV/instrumentation connection on inlet flange
- Anti-extrusion button replaces inlet screen to prevent bladder protrusion without clogs or flow restriction

OPTIONS

SENTRY™ DAMPENER AIR CONTROLS

Type	Description	Max Pressure	Installation
ADJUSTABLE 	Assembly is mounted on a single port with a self-relieving regulator to set dampener pressure. Includes a gauge and one-way brass check valve. Compressed air line must be permanently attached to the regulator. Regulator allows for an easy, convenient method to adjust dampener pressure during system pressure changes.	150 psi (10.3 bar)	<p>Install dampener within 10 pipe diameters of pump discharge. Connect to a constant source of air. DO NOT USE OXYGEN.</p> <p>Charge dampener to 80% of operating pressure. Adjust dampener psi to minimize pulse level.</p>
AUTOMATIC 	Gauge mounted on a side port, valve assembly on the center port, one-way brass check valve connected to an internal poppet valve assembly. (Poppet valve located in the nonwetted portion of the dampener to accommodate for an increase in system pressure). As system pressure increases, bladder is pushed further up into the dampener until it makes contact with the internal valve which then opens, allowing compressed air to enter the dampener. The dampener automatically adjusts as system pressure fluctuates and resets, ready to restart along with system.	150 psi (10.3 bar)	<p>Install dampener within 10 pipe diameters of pump discharge. Connect to a constant source of air. DO NOT USE OXYGEN.</p> <p>When the pump is started, the dampener gauge will read system pressure. No further adjustments are needed.</p>
CHARGEABLE 	Standard chargeable model has a gauge and Shrader-type charging valve on separate ports to pressurize and hold dampener pressure. The <i>V Model</i> assembly has a machined stainless steel charging valve and seal for rugged leak-proof operation in corrosive environments. No permanent source of compressed gas is required. Gas fill valve allows dampener to be manually bled or charged to the required pressure setting.	15,000 psi (1034.2 bar)	<p>Install dampener within 10 pipe diameters of pump discharge or valve, depending on use. Charge dampener to recommended percentage of system operating pressure with compressed air or clean dry Nitrogen. DO NOT USE OXYGEN.</p>
INLET STABILIZER 	The inlet stabilizer air control accommodates pressure or vacuum settings and is adjustable for suction lift or positive inlet conditions. Air control consists of a compound pressure gauge, a pressure/vacuum tight ball valve, and a venturi valve. Compressed air passes through the venturi valve at high speed, creating a low pressure area that evacuates air from the stabilizer (internal vacuum). Conversely, when the air flow through the venturi valve is diverted into the stabilizer, a pressure charge results.	30 inHg 30 psi (2 bar)	<p>Install inlet stabilizer within 10 pipe diameters of pump inlet. Use a compressed air line and air chuck to pressurize or create a vacuum. DO NOT USE OXYGEN.</p> <p>For suction lift, vacuum charge to 5-7 inHg. For flooded suction charge to 50% of static inlet pump pressure.</p>

HYBRID VALVE™

BACK PRESSURE VALVE + PULSATION DAMPENER

Standard back pressure valves were not designed to work with dampeners. As pressure varies in the dampener, the back pressure valve negates the dampening effect by opening and closing before the dampener is able to capture a full pulse. By combining the functionality of a pulsation dampener and back pressure valve into a single piece of equipment the performance of each component is optimized.

The quick opening and closing of a standard back pressure valves also creates too much flow (gain), resulting in inefficiency and chatter.

Blacoh's Hybrid Valve with patented flow stabilization technology ensures maximum dampening, applies continuous back pressure, and acts as an anti-siphon valve to create a smooth laminar flow with no valve chatter.

PERFORMANCE YOU CAN SEE

Tests performed using only a back pressure valve showed no improvement in fluid flow (yellow line in graph below). Fluid flow improves significantly with a pulsation dampener in series (shown in red), but the dampener is not operating at peak efficiency. Nothing matches the outstanding results when the back pressure valve and dampener are replaced with the single construction Hybrid Valve (shown in blue).

SENTINEL™ VALVES

PRESSURE RELIEF VALVES

Pressure Relief Valves—also called safety valves, bypass valves, pump relief valves, or pump safety valves—protect pumps, systems, and tanks from excessive pressure. Prevent damage, reduce the risk of cavitation, and increase personnel wellbeing.

BACK PRESSURE VALVES

Back Pressure Valves—also known as loading valves or anti-siphon valves—play a crucial role in pump application by controlling the pressure on the discharge side of a pump. Prevent premature component wear, improve safety, enhance efficiency, and support multi-pump systems.

NO MORE CHATTER

Most back pressure valves are based on a pressure relief design where the valve is normally closed. When a set pressure point is reached, the valve opens quickly with maximum flow to relieve pressure. This action doesn't work well for back pressure valves that need to flow continuously to hold pressure upstream. When the valve opens quickly, pressure upstream drops rapidly and the valve slams closed. The sudden stop in flow causes a pressure spike that forces the valve open again.

In a back pressure valve application, this cycle occurs many times per second, creating a loud, chattering valve with inferior performance and a shorter service life.

Blacoh's patented valves with flow stabilization technology meter flow when the valve opens to minimize the pressure drop that initiates this cycle. The result is a valve that doesn't chatter, performs better, and lasts longer.

SENTINEL Normally Closed Shutoff Valves offer an excellent high flow coefficient and a low pressure drop that equates to overall faster and smoother fluid flow. Valves are pneumatically controlled and use an internal piston to allow or prevent air or fluid flow. The normally closed valve opens when air pressure is applied to the pneumatic control port.

² Glass columns only

PVC Columns

PVC calibration columns feature three top end cap options:

SEALED

Glued to the cylinder for permanent vent connection. Used in applications with positive suction head.

REMOVABLE

Cap sealed with O-ring for easy removal for cleaning. Used in applications with positive suction head.

LOOSE

Cap acts as dust cover in applications with no positive suction head. Cylinder is filled from the top.

Borosilicate Glass Columns

Glass calibration columns have threaded end caps offered in a variety of materials, two sealing O-rings, and a shield to protect the inner glass tube and calibration scale.

SAFETY

SPILL PREVENTION

AODD pumps are prone to diaphragm failures. When this happens, the process fluid will leak out through the pump exhaust. Now you have an active spill that can cost you thousands in lost product, cleanup, EPA reporting, and production downtime.

Protect your operations with one of these spill prevention products from Blacoh. From the basics to the gold standard, we've got you covered!

AT A GLANCE

FEATURE	SPILLGUARD™	SPILLSTOP™
Automatically shuts off pump	Yes	Yes
Prevents product spillage	Yes	Yes
Fully pneumatic	Yes	Yes
Pump size range	1/2" - 2"	1/2" - 3"
Connection Style	Mounts directly to pump	Connects to pump exhaust
Inlet/Outlet Size	0.75" (20mm)	Various
Body Materials	Aluminum	Various
Float Materials	Stainless Steel	Various
Accessories	Optional stand Exhaust shutoff valve	Warning light, alarm whistle, electro-pneumatic switch, backup pump switchover
Available certifications	None	ATEX

SPILLGUARD™

ESSENTIAL SPILL PREVENTION

Housing Material	Internal Components	Options	Estimated Shipping Weight
Aluminum	Polypropylene Stainless Steel	Stand available when direct mounting isn't possible Exhaust shutoff valve for applications with positive inlet pressure	9lbs - 11lbs (4.0 - 5.0kg)

COMPACT & LIGHTWEIGHT, DESIGNED FOR 1/2" - 2" AODDs

A simple way to add a layer of protection to your existing equipment, SPILLGUARD will likely pay for itself after just one diaphragm failure.

Model	Description
SGD-02 SGD-020-S 50-01K-2	Aluminum/Stainless with Union connection Aluminum/Stainless with stand, FNPT connection Exhaust shutoff valve

SPILLSTOP™

ADVANCED SPILL PREVENTION

SPILL PREVENTION FOR COMPLEX ENVIRONMENTS

Along with automatic pump shutdown and spill containment, SPILLSTOP gives you the flexibility to do more: connect backup pumps for immediate switchover, trigger alarms and whistles for instant on-site alerts, or seamlessly integrate with your facility's SCADA/PLC panel.
